

Vegetation Management for Industrial Sites & Landfills

Vegetation management is a crucial component of industrial property management, particularly for landfill sites.

The effective management of vegetation at landfills is a challenging task that requires a customized solution. VegClear is a company that specializes in herbicide based vegetation management services for industrial property managers and waste site supervisors.

VegClear™ - Industrial Vegetation Management provides Commercial Weed Control, Kudzu Abatement, Low Volume & Blanket Applications, Roadside Treatments, and Herbicide Spraying. Our Clients Include Commercial Property Managers, Landscapers, Government, Industrial, Rail, Retail, and Utility Managers.

Industrial Vegetation Management on Landfills

VegClear offers effective and reliable herbicide-based vegetation management services for industrial property managers and waste site supervisors. Our services are customized

to meet the unique challenges of landfill sites and other industrial properties. We use selective and nonselective herbicide products that are efficient, cost-effective, and approved by the EPA for use at landfills and most other commercial and industrial sites.

Approach

VegClear provides site-specific weed control treatment approaches, pre-application vegetation analysis, and

follow-up assessments at appropriate intervals. The company's approach combines selective and non-selective herbicide products that are both efficient and cost-effective. VegClear's services are designed to help industrial property managers who seek non-mechanical means

to control vegetation and maintain their landfills.

Selective Herbicides

Selective herbicide applications are used by VegClear to maintain turf-grass areas, vent caps, and hilltops. The herbicides used are EPA-approved for use at landfills and most industrial and commercial property types. Selective herbicide applications remove weeds and undesirable woody vegetation, promoting the growth of low-height grasses. Routine applications may also include growth regulator mixes that remove undesirable vegetation and reduce the frequency of mowing cycles, making mechanical trimming less frequent or unnecessary.

Total Vegetation Control

VegClear's bare ground applications are designed for total vegetation control in areas like graveled lots, roadbeds, fence lines, and rail spurs. These applications eliminate and control growth before mechanical approaches become necessary, while also protecting the environment. All of VegClear's expertly applied herbicides are approved by the EPA for use at landfills and most other commercial and industrial sites.

Landfill & Industrial Site Expertise

In addition to vegetation management services, VegClear offers development consulting services that focus on finding solutions to vegetation site challenges that exist today or pose a potential risk in the future. The company's engineering team is involved early on in the development process to provide the most valuable services before vegetation is planted or installed. VegClear's team has

extensive experience working on confidential projects under non-disclosure agreements. The company prioritizes the privacy and security of its clients' projects.

Growth Regulator & Chemical Mowing

Growth regulator product application is designed to reduce mowing frequency by regulating grass growth and controlling broadleaf weeds. At VegClear, our teams of

experts are well-equipped to handle growth minimizing situations, and we ensure that our treatments are safe and effective. With our expert applications, your maintenance team is able to reduce mowing frequency by slowing grass growth and controlling broadleaf weeds.

Re-Vegetation of Landfill Sites

Revegetation is a critical aspect of regulatory compliance for landfill sites. VegClear has the expertise and experience

to help clients achieve their revegetation goals while remaining compliant with all applicable regulations. Most landfills are subject to a decades-long post-closure maintenance requirement that is critical to consider when

evaluating options for vegetation management and delivery of contracted services by industry providers.

Tying it All Together

In conclusion, VegClear provides effective and efficient herbicide-based vegetation management services for industrial property managers and waste site supervisors. Their services are designed to meet the unique challenges that landfill sites pose and are tailored to the specific needs of their clients.

VegClear's expertise and experience make them a reliable partner in the effective vegetation management of industrial properties.
